

Simmod 8.6 and 8.6.1 Changes and Enhancements

- The user interface has been entirely recompiled in the 64-bit Java 17 language. Many code changes have been made to improve runtime efficiency, future operability, and adherence to Java coding best practices.

Simmod 8.6.2 Changes and Enhancements

User Interface Change Descriptions

- **Network Builder:** The Set Scenarios Folder tool now checks to ensure that the selected folder has “write” permission (i.e., is writable).
- **Network Builder:** A typographical error was corrected in the Probability Distribution Builder.
- **Network Builder:** Departure Queue Builder erroneously required that at least one route be selected for each departure queue. Fixed to allow zero routes be selected.
- **Network Builder:** The simu26_ground_movements report was revised to allow instances when an aircraft performed multiple taxi movements within the same ground movement area.
- **Network Builder:** Corrected an error in the computation of the vector deflections.
